The e-learning platform:

The VET Marketplace online learning platform is officially live!

Designed to **connect vocational education and industry**, the VET Marketplace platform combines **communication** and **entrepreneurial** skills training with **real-world projects** proposed by companies, enabling learners to build practical experience while developing the skills needed to manage clients, deliver projects and pursue professional or freelance careers.

The **VET Marketplace e-Learning Platform** has reached a major milestone: after months of **testing**, user **feedback**, and continuous **improvements**, the platform is now connecting students, trainers and companies through a unique digital environment dedicated to vocational education and work-based learning.

Since its launch, the partnership has worked closely with learners, mentors and businesses to enhance the user experience, strengthen collaboration opportunities and support the development of practical skills through real-world projects.

Today, users can access **courses**, **company assignments** and **mentoring opportunities** in one place, creating new pathways for professional growth and stronger connections between education and industry across Europe.

The project in numbers

Nearly 200 users have registered to participate in the VET Marketplace, gaining access to hands-on training and industry-driven opportunities.

69 badges have been awarded to learners so far, showing strong engagement and comprehension with the platform's courses.

47 businesses across Europe have registered on the platform, providing learners with access to real-world projects and mentoring opportunities.

The courses are available in **5 languages**: English, Italian, Greek, Polish and German.

Join the movement!

Whether you're a student eager to gain practical experience or a company interested in supporting future professionals, the VET Marketplace provides a space to connect, collaborate and grow together. Register today and discover the opportunities available on the platform.

The first months of implementation have already demonstrated the strong potential of the VET Marketplace approach. Learners are actively **completing courses, earning badges and engaging with company assignments**, while businesses across the partner countries are increasingly contributing projects and mentoring opportunities.

These early results **confirm the value of combining digital learning with practical experience**. By working on real projects proposed by companies, learners can apply newly acquired skills in authentic professional contexts, while employers gain the opportunity to connect with emerging talent and contribute to skills development.

The journey continues

While the first achievements are already encouraging, **the VET Marketplace journey is only beginning**.

The partnership will continue supporting students and companies over the coming months, expanding platform assignments and collecting new success stories across Europe. With participants from Belgium, Italy, Greece, Poland, and Germany, the VET Marketplace is designed for transferability and wider adoption.

Stay tuned !

The next project newsletter will showcase the platform's future, highlighting the outcomes of our TPM and outlining the next steps.
